Front-end Developer with 5 years of experience and 6 years in the IT Sector with a technological stack in Javascript(React, AngularJS, Typescript), MySQL, NodeJs, Jira, Bitbucket, Git, Github, AzureDevops. I have worked in the field of consulting providing support to strategic clients in the private sector. I am always in constant search of new opportunities for me to expand my knowledge in new technologies and projects that allow me to grow professionally.

WORK EXPERIENCE

TORC LLC, Front-end Developer — July, 2023 – current position

- Correcting hotfixes, issues and new code requirements in front-end torc's applications in various pages.
- Implementing new design in code for specific jobs page, adding new content, fields, validations, images, among others to translate the design created previously in figma to the front-end application.
- Testing and making reports of every implementation made to keep record of the changes.

Technological stack: HTML5, CSS3, Tailwind, Javascript (Jquery), React.js, PHP, Git, Github, Visual Studio Code, GraphQL.

ACCENTURE SRL, QA Automation Eng Analyst project #2 - Internal Accenture Application - December, 2020 – July 2023

- The user experience was improved by 80% by implementing accessibility tools within the front-end.
- The user experience was improved by 50% by creating validations in several of the forms presented by the software to help the user identify the necessary data to complete.
- Software quality tests were optimized by 50% with the implementation of their automation.

Technological stack: Web software with Javascript (AngularJS, Typescript), SQL (postgresql), NodeJs VisualStudio, Git and AzureDevops.

ACCENTURE SRL, QA Automation Eng Analyst project #1 – Technical Internet Application - December, 2020 – July 2023

- Software options were optimized by 30% by implementing a new workflow without quality.
- A flow was generated to be able to complete the tasks without an internet connection. 10% impact on the entire application. Keep the database updated and with what is necessary with the automation of deleting the record with a time greater than 30 days.
- The possibilities of registering repairs have been increased by 10% by adding the corresponding antenna models.

Technological stack: Mobile App with HTML5, CSS3, Javascript (JQuery), PHP (laravel, composer), VisualStudioCode, MySQL (Workbench) Git, Postman, Bitbucket.

CODEV, Full Stack Developer - march, 2018 – December 2020

- Software improvements of 80% were implemented, the layout and functionality of the front-end was developed for various e-commerce, so that the products and services available to each client can be viewed on the web domain. This generated that the user can select a product and then make the purchase of it.
- An impact of 50% was created through the implementation of a style sheet to improve the user's experience when viewing the information and so that the messages and intentions that the company has proposed can be transmitted.
- Review and creation of a relational database together with the subsequent integration of services and validations with an API-REST to be able to connect them with the front-end. An improvement of 40% since it allowed manual testing of the services through tools such as postman.

Technological stack: Ecommerce with HTML5, CSS3, Javascript (JQuery), PHP (laravel, composer), VisualStudioCode, MySQL (Workbench) Git, Postman, Bitbucket.
